

2024 06<sup>TH</sup>  
NOVEMBER

# PROCEEDINGS 2024

13<sup>th</sup> Annual Science Research Session

**EMPOWERING INNOVATIONS FOR  
SUSTAINABLE DEVELOPMENT THROUGH  
SCIENTIFIC RESEARCH**

Faculty of Applied Sciences  
South Eastern University of Sri Lanka

36	Optimising Multi-Document Summarisation for Efficient Digital Library Document Retrieval	39
	<i>Akmal Jahan M. A. C. and Vimalathas A.</i>	
37	Wildlife and Environmental Monitoring in Paddy Fields Using IoT & Machine Learning	40
	<i>Roxshan A. A. and Akmal Jahan M. A. C.</i>	
<b>Environmental Sciences</b>		
38	A Preliminary Study on Plant Diversity in Dune Slacks of The Manalkaadu Dune Complex, Jaffna Peninsula, Sri Lanka	42
	<i>Amarasekara E. A. K. K., Perera H. A. C. C., Yatawara M. D. M. D. W. M. M. K and Jayasiri H. B.</i>	
39	Siliceous Phytoliths in Taxonomy of The Sri Lankan Wild Relatives of Rice ( <i>Oryza</i> , Family Poaceae)	43
	<i>Wijesinghe T., Jeewani D. C. and Perera A.</i>	
40	A Rapid Biodiversity Assessment in Ethaleikulam Tank in Batticaloa District; A Case Study from The First Environmental Protected Area Declared in The Eastern Province of Sri Lanka	44
	<i>Gayathiri. S</i>	
41	Impact of Enso on Marine Phytoplankton Abundance in Sri Lanka: Insights Using Sattelite Data	45
	<i>Rajapaksha K., Naveendrakumar G.</i>	
42	Assessing The Potential of Soil Microbial Biomass Carbon and Its Interrelationships with Soil Available Macronutrients: A Case Study in Katupotha Dry Zone Forest Systems, Mihintale, Sri Lanka	46
	<i>Kiruciga M., Premarathna W. D. U., Perera G.A.D., Ratnayake R.R.</i>	
43	Assessment of Soil Microbial Biomass Carbon and Soil Available Nutrients: A Case Study on Chena Cultivation Lands in Mihintale, Sri Lanka	47
	<i>Rammiya M., Premarathna W. D. U., Perera G. A. D. and Ratnayake R. R.</i>	
44	Sri Lankan Marbles: Geochemical and Mineralogical Insights into Economic Potential	48
	<i>Wickramasinghe W. A. G. K., Madugalla T. B. N. S., Pitawala H. M. T. G. A.</i>	
45	A study on manufacturing a sustainable product using coconut shells – Special reference to Boralessgamuwa Area	49
	<i>Dias R. A.</i>	
46	A Study on Phytoplankton Abundance and Diversity in Relation to Reservoir Water Level and Water Quality: A Study in Magalla Reservoir in Sri Lanka	50
	<i>Abeyasinghe A. M. P. M., Perera H. A. C. C., Hewageegana N. and Samaranyake D. A. G. G. S.</i>	
47	Threats to the Sri Lankan Leopard: An Analysis of Mortality Data	51
	<i>Fernando B.V.P., Karawita K.V.D.H.R., Kumara, P.H.S.C., Jayapali U., Madhumadhawa R.C.</i>	

## **IMPACT OF ENSO ON MARINE PHYTOPLANKTON ABUNDANCE IN SRI LANKA: INSIGHTS USING SATELLITE DATA**

**Rajapaksha K.**\* and **Naveendrakumar G.**

ENSO (El Niño Southern Oscillation) events lead to ocean warming specifically affect marine phytoplankton abundance in the ocean by altering water temperature, and stratification, thereby impacting phytoplankton growth and distribution. This study analyzed a time series of satellite-derived Chlorophyll-a (Chl-a) concentration data, to investigate the mechanisms driving phytoplankton variability in the maritime zone of Sri Lanka. Although the impact of ENSO on marine phytoplankton is indirectly felt, scanty research is available for Sri Lanka. Thus, the objectives of this study were to investigate the Sea Surface Temperature (SST), and Chl-a concentration of sea using remotely sensed spatial data especially gathered using the MODIS satellite in the maritime zones of Sri Lanka. NASA's Ocean Color Web images, obtained using SeaDAS Explorer (which utilizes data from MODIS), used for this study. The analysis focused on the period from 2004 to 2023, particularly the influence of the ENSO events and annual average values of Chl-a and SST in 0-12 and 12-24 nautical miles (nmi) shoreline bands in maritime zones subjected geostatistical analysis. Nearly 3000 points selected for the assessment of Landsat images in ArcMap 10.8 to validate the observational data. Chl-a exhibited a significant negative correlation with SST, with notable time lags, while showing a positive correlation with ENSO events. These findings enhance the understanding of the complex interplay between ENSO events, SST, and phytoplankton dynamics, highlighting the need for continued monitoring of seasonal ocean currents and climate-related changes in the ocean.
